Loading ramp

Receiver ramp

Conveyor belt collector of waste

Control cab

Two-sided drive of the header

3 stages of shaving sizes regulated from the operator's cab

*Purchase of a barker is a profitable investment that is frequently omitted in the sawmill sector. The use of barker for initial processing of wood allows for more effective selection of material, lower processing costs and protection of tools. It is also worth stressing that barking can form an additional source of income or fuel.*
